RECENT TRENDS IN SELECTED NEBRASKA ECONOMIC NUMBERS

Updated January 24, 2018

LABOR FORCE AND UNEMPLOYMENT: Preliminary numbers from the Nebraska Department of Labor show the state’s labor force averaged 1,010,518 persons in December 2017, which was 2,169 more persons than in November 2017. 27,667 persons were unemployed in December in Nebraska compared to 23,919 persons the previous month.

The annual average Nebraska unemployment rate has been among the lowest in the nation for years (Figure 1). In December 2017, the preliminary Nebraska seasonally adjusted unemployment rate was 2.7 percent, compared to 4.1 percent for the U.S.

In December 2017, the Omaha MSA, which includes counties in Iowa, had a not seasonally adjusted unemployment rate of 2.8 percent; the Lincoln MSA had a not seasonally adjusted rate of 2.4 percent; and the Grand Island MSA had an unemployment rate of 3.1 percent.

The annual average Nebraska unemployment rate was 4.4 percent in 2011, 4.0 percent in 2012; 3.8 percent in 2013; 3.3 percent in 2014; 3.1 percent in 2015; and 3.2 percent in 2016 compared to 8.9 percent, 8.1 percent, 7.4 percent, 6.2 percent, 5.3 percent and 4.9 percent overall in the U.S. (Figure 1).

JOB GROWTH: The Nebraska growth in non-farm payroll employment (jobs) has generally been positive in recent years. The Nebraska Department of Labor’s preliminary numbers estimate that there were 1,037,248 nonfarm jobs in the state in December 2017, or 2,245 fewer jobs than in November. The number of not seasonally adjusted nonfarm jobs totaled 512,646 in the Omaha MSA; 194,519 in the Lincoln MSA in December 2017; and 42,470 jobs in the Grand Island MSA. Job numbers decreased in Omaha and Lincoln in December 2017.
MANUFACTURING JOB GROWTH: During the 2007-2009 recession years, manufacturing job growth in both the nation and in Nebraska suffered – state manufacturing job numbers fell 8.1 percent between those years. Since then, there has been some rebound (a 5.0 percent growth in Nebraska’s manufacturing job numbers between 2011 and 2015), but there was another fall-off in job growth in 2015 (Figure 2). In December 2017, the Nebraska Department of Labor preliminary estimates show that Nebraska averaged 98,635 manufacturing jobs. That represented 93 fewer manufacturing jobs than in November 2017.

The number of Nebraska manufacturing jobs increased 1.8 percent in 2011, increased 1.7 percent in 2012, increased 1.6 percent in 2013, increased a modest 1.0 percent in 2014, decreased 0.1 percent in 2015, and remained unchanged in 2016. Overall in the U.S., the number of manufacturing jobs increased 1.7 percent in 2011, increased 1.7 percent again in 2012, increased 0.8 percent in 2013, increased 1.4 percent in 2014, increased 1.2 percent in 2015, and increased 0.1 percent in 2016. Since 2014, then, Nebraska has fallen behind national manufacturing employment growth trends.

RESIDENTIAL BUILDING UNITS: The U.S. Bureau of the Census' Construction Statistics Division reported that Nebraska permit-issuing places authorized the construction of 799 new residential units in November 2017. That represented an increase of 38.2 percent in the number of units compared to the number authorized in October 2017. The value of new residential permits increased from $111,627,000 in October 2017 to $134,579,000 in November 2017, a 20.6 percent increase. It also represented a 32.7 percent increase compared to November 2016.

The annual number of new Nebraska residential building permits; increased 17.5 percent in 2012, increased 23.3 percent in 2013, increased a very modest 1.9 percent in 2014; increased 5.3 percent in 2015; and decreased 0.2 percent in 2016 (see Figure 3 and Nebraska

![U.S. and Nebraska Manufacturing Job Growth, 2011 to 2016](imageurl)
Databook). Nationally, the number of residential units increased 32.9 percent in 2012; 19.4 percent in 2013; 6.2 percent in 2014; 12.4 percent in 2015; and 2.0 percent in 2016.

**NET TAXABLE RETAIL SALES:** For the past several years, Nebraska’s monthly net taxable retail sales have increased modestly on an annual basis (see Table 4). Each month’s sales are slightly higher than the same month of the previous year. In October 2017, state net taxable retail sales totaled $2.4 billion, or 3.3 percent less than in September 2017, but 2.7 percent more than October 2016. Net taxable sales in Nebraska also exhibit a strong seasonality.

Total annual taxable retail sales in Nebraska increased 5.4 percent in 2011; increased 4.2 percent in 2012; increased 5.3 percent in 2013; increased 3.0 percent in 2014; increased 0.9 percent in 2015; and increased 4.2 percent in 2016. In 2004, the state sales tax rate was set permanently at 5.5 percent and sales taxes on some services were eliminated.
MERCHANDISE EXPORTS AND IMPORTS: Nebraska has been a major exporter of agricultural crops and livestock products for many years (see *Nebraska Databook* table). The state has also increased exports of other goods and services (see Figure 5). In November 2017, Nebraska goods exports were down 11.0 percent compared to October 2017. Specifically, they totaled $645.9 million in October compared to $574.9 million in November. They were up 6.8 percent compared to Nebraska exports in November 2016.

In 2010, the U.S. Census Bureau began releasing estimates of the value of state imports based on the final destination of import shipments reported at the time of entry into the U.S. (see Figure 6). Those numbers suggest that monthly Nebraska imports generally average 40-50 percent of the value of state exports. Imports were up an estimated 14.7 percent year-over-year, but were down an estimated 0.7 percent in November 2017 compared to November 2016.

INCOME: Historically, Nebraska's per capita income (PCI) has been below the U.S. average (Figure 7). In 2002, Nebraska per capita income was 4.0 percent more than the national average; but, in 2016, the U.S. Bureau of Economic Analysis estimates show the state’s PCI at $49,636, which was just 0.1 percent more than the U.S. figure. That value was actually down from the previous five-years, when the Nebraska PCI averaged 102.5 percent of the national average.

As the State Data Center wrote “Nebraska’s per capita income declined in relation to the US between 1970 and 1989 and fluctuated between 95 and 100 percent of the national average from 1994 to 2010. Beginning in 2011, Nebraska’s per capita income moved above the national average for the first time since 1975 and only the 5th time since the series began in 1929” (State/Local Population Trends, Nebraska State Data Center, August 17, 2016).

Nebraska per capita personal income jumped 12.3 percent to $44,864 in 2011, increased by 2.7 percent to $46,060 in 2012, fell by 0.4 percent to $45,858 in 2013, then rose by 5.4 percent to $48,321 in 2014; in 2015, rose 0.5 percent to $48,544; and, in 2016, rose 2.2 percent.

COST OF LIVING: In a community cost of living index compiled for 265 U.S. urban areas by C2ER, the two Nebraska communities in the survey have generally been below the national average for the six expenditure categories tracked. Looking at their composite indexes for the third quarter of 2017, the two Nebraska communities’ composite value was below the U.S. average of 100.0 at 92.0 (see Figure 8). With an individual composite index of 91.0, Omaha scored lower than Lincoln, the other Nebraska community in the survey. Unlike Omaha, Lincoln was above the national average for transportation, health care, and miscellaneous expenses but its composite index was below the national average.
POPULATION: From 1974 to 1990, Nebraska experienced a net out-migration of people. But the U.S. Census Bureau reported that Nebraska's 2000 population was 1,711,263, or 132,846 persons higher than in 1990. Natural increases (births exceeding deaths) contributed to the state's 8.4 percent population growth, but a significant factor was international migration. The Census Bureau reported the state's 2010 population was 1,826,341 persons, or 6.7 percent higher than 2000 (see Nebraska Databook table). And, the Census Bureau’s estimate of the state’s 2017 population reached 1,920,076 persons, or 5.1 percent higher than the 2010 Census. The national growth rate during the same years was 5.5 percent.

County-level 2000 Census numbers showed population growth in 40 of Nebraska’s 93 counties between 1990 and 2000, compared to only ten counties between 1980 and 1990. Between 2000 and 2010, 24 counties experienced population growth; and between 2010 and 2015, an estimated 31 counties had population growth. Sarpy County, at 29.6 percent, and Lancaster County, at 14.0 percent, were the top growth counties in 2010.

Nebraska’s Short-Term Economic Outlook: “The Leading Economic Indicator – Nebraska (LEI-N) 1 rose by 0.64% during November of 2017. The increase in the LEI-N, which is designed to predict economic activity six months into the future, suggests that Nebraska economic growth will continue through the second quarter of 2018. The increase in the indicator was due to an increase in building permits for single-family homes. There also were positive business expectations during the month. In particular, respondents to the November Survey of Nebraska Business reported plans to increase sales and employment in the coming months. In terms of negative components, there was a rise in initial claims for unemployment insurance on a seasonally-adjusted basis. There also was an increase in the value of the U.S. dollar in November. A higher dollar is challenging for Nebraska exporters.” (http://cba.unl.edu/outreach/bureau-of-business-research/documents/LEI_12_2017.pdf)
