AK Acres Popcorn Company

Seth Kunnemann
seth@akacres.com
308-882-5379

akacres.com

33297 740 Rd.
Imperial, NE 69033

Products Offered:

- Yellow Butterfly Popcorn
- Yellow Mushroom Popcorn
- White Butterfly Popcorn

AK Acres Popcorn Company is a grower, processor, packager and worldwide wholesaler of premium quality popcorn. The majority of our customers are exporters, distributors, packagers, snack food retailers, and poppers who purchase our popcorn in bulk. Our packaging options include 35 lb bags, 50 lb bags and 2,200 lb bulk tote bags.

AK Acres Popcorn Company contracts all of its popcorn production in the fertile plains of southwest Nebraska and northeast Colorado. The dry climate in combination with warm days and cool nights makes this area of the United States an outstanding environment for the production of high quality popcorn. In addition, this land is located above a large underground aquifer that provides the popcorn crop with an abundant source of water. The fact that our production is 100% irrigated means a stable supply even in years of drought.

American Foods Group

AMERICAN FOODS GROUP

Keith Obermiller

Director of International Sales

kobermiller@americanfoodsgroup.com

americanfoodsgroup.com

Markets: American Foods Group exports to over 40 countries around the world with the ability to ship directly to the destination and provide export documentation.

Products Offered

- Boxed Beef

American Foods Group, the 5th largest beef packer in the United States and the largest family owned beef packer in the United States is a full line supplier of fresh & frozen boxed beef, variety meats, portion cut steaks and further processed cooked and uncooked product.

American Foods Group offers Certified Halal product from all 4 of our Beef harvesting plants which harvest over 7,000 head of Steers & Cows each day. American Foods Group is a 40 year member of the United States Meat Export Federation.

Cargill Protein - North America

Cargill's 160,000 employees across 70 countries work relentlessly to achieve our purpose of nourishing the world in a safe, responsible and sustainable way. Every day, we connect farmers with markets, customers with ingredients, and people and animals with the food they need to thrive. We combine 154 years of experience with new technologies and insights to serve as a trusted partner for food, agriculture, financial and industrial customers in more than 125 countries. Side-by-side, we are building a stronger, sustainable future for agriculture.

Cargill's North America protein business produces fresh, frozen and cooked beef, turkey, pork, chicken and egg protein offerings, sauces, soups, case ready products, pet treats and by-products for our retail, foodservice and food ingredient customers. As a customer-centric organization, it focuses its wealth of business expertise and capabilities, innovation, research and development, consumer insights and product support to deliver protein solutions that offer distinct value to help its customers grow.

Protein – North America has a diverse 28,000-member team and operates approximately 60 protein facilities, distribution centers, feed mills, hatcheries, and an innovation center in the U.S. and Canada, in addition to maintaining international sales offices.

Certified Piedmontese Beef

Certified Piedmontese is a healthier beef option that doesn't sacrifice flavor or tenderness. Our cattle are raised responsibly on family ranches across the Midwest, never given antibiotics, steroids, or hormones. We raise the rare Piedmontese breed with a ranch-to-fork approach that ensures traceability, environmental sustainability, humane animal handling, and responsible resource management at every step.

Products Offered

- Steaks and Roasts
- Ground Beef and Assorted Cuts
- Beef Jerky and Snack Sticks
- All-Beef Hotdogs and Bratwursts
- Grass Fed-Grass Finished
- Dynasty Selection
- Beef Club
- Gift Boxes

piedmontese.com

4841 North 84th St.
Lincoln, NE 68507

Markets: Europe, Caribbean, Japan, South Korea, Singapore, Hong Kong

A rare breed from the base of the Alps in Northwest Italy's Piedmont region, Piedmontese is a naturally leaner and more muscular variety of cattle. Our Certified Piedmontese cattle spend their lives grazing native pastures on family ranches in the Midwest where they are free to roam in the comfortable surroundings. Preserving natural resources while still providing our cattle balanced nutrition is not just sustainable for the environment but also allows for more consistency in your product while having more health benefits for the consumer and for the animal. This higher standard of care is the type of quality we want to come across in all aspects of our product and business.

Our company is focused on quality in every aspect from the cattle, to the ranches, and the food that ends up on your table. Our program is a source-verified, ranch-to-fork operation rooted in commitment to our land, ranchers, cattle, consumers, and products. These systems ensure that our Certified Piedmontese beef meets our high standards for care, handling, and quality and gives you the consumer the best possible product.

Fremont Beef Company

Fremont Beef Company is a further processor supplying high quality American pork and beef products for foodservice, retail, and further manufacturing. Our attention to safety and quality allows us to deliver products that adhere to the most stringent of customer specifications. We specialize in ground, trimmed, and portion cut processing.

Kelley Bean Company

From our humble beginnings in 1927, we have traveled along a sustainable path of growth to become one of the largest originators and marketers of dry edible beans in the world. We are an employee and family owned company and defined by the values of absolute integrity, hard work, dedication, service, and community involvement. These values permeate our culture and are found in every bag we produce. Our neighbors are the farmers that cultivate our products. Our families are among those who consume what we sell. We take these responsibilities extremely seriously and endeavor to exceed the expectations placed upon us. From farm, through family, to you: We Are Kelley Bean.

Supplies:

- Popping Oil and Popcorn Salt
- Custom Popcorn Bags
- Commercial Poppers

Markets: Europe, Africa, North America, South America, Central America, SE Asia, India, China, South Korea

For more than thirty years, we've grown, processed, and distributed premium Non-GMO popcorn from the North Loup River Valley to businesses around the world. We deliver bulk popcorn kernels and popcorn supplies packaged to your specifications - delivered by rail and container to a variety of organizations. Our FDA licensed and inspected popcorn processing environment is Nut-Free, Peanut-Free, Soy-Free, Dairy-Free and Gluten-Free.

Nebraska is the best place on the planet to grow popcorn, with rich fertile soil, abundant underground water for all irrigated production, and long, hot summers that produce the tender and delicious product that is loved by so many. It's been our way of life for more than a century, and our passion shows in the quality of every kernel.

qpil.com

10404 F Plaza
Omaha, NE 68127

Products Offered

- Boneless raw ham muscles
- Pork Trimmings
- Boneless or semiboneless ready to eat hams

Founded in 1983, Quality Pork International is a privately held corporation that specializes in deboning hams for packers, further processors and export customers. The company debones more than 25 loads (one million pounds or 454,000 kgs) of bone-in hams per day.

Even with this incredible volume, our state-of-the-art processing facility, completed in 1997, ensures a consistent, top-quality product for our customers every time. In all the world it's hard to find a facility more fit to maximize the quality of product you will receive. Quality Pork International's plant is divided into two processing rooms which include two deboning lines per room. The product and employee flows were designed to provide optimum efficiency with maximum food safety.

In addition to a high-volume business to major resellers in the United States, Quality Pork International currently exports products to Asia, Central America and Canada. The staff and employees are very experienced in the production of accurate export documents and sensitive to the requirement of quality, consistent products every time.

Richardson Milling, Inc.

Richardson Milling is one of the largest oat millers in North America and brings quality ingredients to the tables of families around the world. Markets: Currently in the United States, Canada, and India but are interested in exploring additional markets

Products Offered

- Tender & True Premium Dog Jerky Treats
- Tender & True USDA Certified Organic Recipes
- Tender & True Animal Welfare Certified Brown Rice Recipes
- Tender & True Sustainable Seafood Certified Limited Ingredient Seafood Recipes

We know you demand the best ingredients for your pets and expect the utmost care for our environment. That's why, in October 2014, Tender & True changed the pet food industry forever. Pioneering the first pet food meeting USDA standards to be truly organic to farm to bowl and offering a full line of Global Animal Partnership (GAP) animal welfare certified pet food. GAP ensures that the farm animals used in our recipes have been raised in an environment that limits stress and provides an enhanced quality of life. This means they have been raised without the use of antibiotics or growth hormones, provided indoor and outdoor access, premium food and water, as well as space requirements: such as no cages, crates, or crowding.

We continued our search for sustainable and responsibly sourced ingredients by partnering with the Marine Stewardship Council (MSC) in 2015 to source only wild-caught fish for our dry and canned recipes. In 2019 we obtained NonGMO Project Verification on our premium USDA Certified Organic Chicken and USDA Certified Organic Turkey Jerky. We continue to blaze a trail of firsts, setting new standards in the industry for quality, excellence and care. With a focus on sustainability and animal welfare...we're what's next.

Trinidad Benham Corporation

We are the leading independent U.S. packager of dry edible beans with processing and packing facilities across the country. Beans have been at the core of our business for over a century.

Central Plains Milling is the premier Livestock Feed Manufacturing Company serving livestock producers throughout the state of Nebraska. We stand on the forefront of new technology implementations in feed manufacturing and provide management tools that help with better efficiency, along with high quality feed that result in long term success for our customers.

As a livestock producer, your main concern is the health of your animals. A healthy animal starts with a well-fed animal. Our team has the expertise to create an animal health and nutrition plan to meet your specific needs.

We offer a diversified package of techniques to master the art of feed manufacturing from minerals to complete feeds. Our technology systems allow us to focus on quality, micron size, inclusion accuracy, and traceability. We provide feed sampling and an in depth record system to back up our process and quality control points.

We stand behind our products and solutions, and offer competitive pricing, quality ingredients, and a knowledgeable staff to help you with each angle of your operation. We pride ourselves on building a winning team that goes the extra mile to gain your trust when becoming our customer.

Serving Nebraska and surrounding states out to western regions of the United States.

Central Valley Ag

Central Valley Ag (CVA) is a member-owned cooperative offering products and services in grain, agronomy, feed and energy. Each and every day, the employees of CVA strive to live up to the CVA Mission Statement: Embracing the cooperative spirit to deliver value to our members.

Casey Potter

Sr. Vice President Grain

casey.potter@cvacoop.com
888-343-0323

cvacoop.com

PO Box 429
York, NE 68467

Markets: Worldwide

Products Offered

- Corn
- Soybeans
- Wheat
- Milo
- Value-Added Grains (organic, non-GMO, white corn, etc.)

Being a member-owned cooperative, Central Valley Ag sources grain from member-owners and then offers that grain to processors or end-users. A variety of corn, soybean, wheat and milo are harvested in our geographic regions of Nebraska, Kansas and Iowa and brought to a CVA grain location for consolidation and eventual sale to end use customers. This grain includes that which is considered value-added grain such as organic, non-GMO, white corn, among others. CVA has strategically positioned itself on both the Union Pacific (UP) and Burlington Northern Santa Fe (BNSF) railroad lines. These connections allow us to market grain to all major export, feeder and destination processor markets west of the Mississippi. CVA grain locations provide a combined capacity of over 86 million bushels, all licensed by the United States Department of Agriculture.

Markets: Global – serving customers within the global food, feed and fuel supply chains around the world.

The Gavilon Group, LLC connects producers and consumers of feed, food and fuel, linking agricultural supply with demand through its global supply chain network. The company provides origination, storage and handling, transportation and logistics, marketing and distribution, and risk management services to customers and suppliers across the globe.

Gavilon combines a local presence with our global network of destination markets. We build strategic relationships with producers and consumers of grain, food and feed ingredients, and fertilizer. With facilities located in major growing areas and on major railroads, rivers, and ports, we have the resources and infrastructure to provide competitive values across these agribusiness supply chains.

Behind every transaction is a team of professionals you can count on to manage your commodities and help manage your risk. Using our in-depth knowledge of commodity markets and movement empowers our team to navigate the increasingly complex global supply chain and provide producers and customers with local operational knowledge and global market intelligence. A wholly owned subsidiary of Marubeni Corporation, Gavilon employs more than 1,900 people at nearly 300 facilities and offices worldwide.

Hansen-Mueller

Since the beginning, commodity trading has been at the core of our business. Our experienced and informed traders handle commodities including corn, soybeans, wheat, milo and oats, as well as a number of feed ingredients and byproducts like dried distillers grains (DDGs), soybean meal, and soy hull pellets.

Our Houston elevator is an import and export facility that handles both conventional and organic commodities. We are currently importing specialty conventional and organic grains. We can offer most grains and some feed ingredients on FOB vessel or CNF Destination. We specialize on combo vessels. Port of Houston cost makes our facility more economical to load less than 25,000mt vessel vs New Orleans. We also offer loading and unloading of grains and feed ingredients loaded in 20-foot and 40-foot containers.

Hansen-Mueller provides trading and logistics services in specialized commodities, feed, and other dry bulk materials. From on-farm grain loading by truck, to ocean vessels and everything in between, we have the experience, the contacts and the facilities to assist you with importing, exporting, storing and trans-loading bulk commodities.

- Dried Distillers Grain Solubles (DDGS)
- Modified Wet Distillers Grain (MWDG)
- Inedible Corn Oil
- Corn Condensed Distillers Solubles (Syrup)
- Denatured Ethanol

LD Norfolk LLC is an ethanol plant located in northeast Nebraska. We specialize in the safe, efficient production of quality denatured ethanol and animal feeds. A pillar in the local agricultural community, our plant procures locally grown #2 yellow corn, providing a strong market for our region's grain production. As a co-product of ethanol production, our distillers grains are fed to cattle, swine and poultry. Located in one of the top cattle feeding regions in the country, our distillers are an integral component of a high yielding beef diet.

LD Norfolk LLC is owned by Louis Dreyfus Company. Founded in 1851, Louis Dreyfus Company is a leading merchant and processor of agricultural goods. Our activities across a diversified range of business lines span the entire value chain, from origination to distribution, helping to feed and clothe up to 500 million people every year. Our strong values, rich heritage, and clear vision for a safe and sustainable future guide us in our work to contribute to the global effort of providing sustenance for a growing population.

Nebraska Irrigated Seeds

Nebraska Irrigated Seeds provides the best quality seed by utilizing the most advanced equipment and technology in the seed industry. Our seed fields are contracted with highly experienced growers over a large portion of eastern Nebraska to minimize loss during extreme weather events. With our ability to provide a large area of growing options, we are able to accommodate today's strict isolation requirements for the purest seed possible.

Nebraska Irrigated Seeds is family owned and operated company founded in the mid 1930's. NIS is a large independent seed corn and soybean seed producer in the Midwestern corn belt. NIS offers the full spectrum of seed production including producing, processing, manufacturing, shipping and distribution of corn and soy products through custom-contracts in industry leading facilities complete with logistics planning and climate controlled warehousing of all row crops.

Enzyme products for ethanol
production

Novozymes' Blair Nebraska facility is the largest dedicated enzymes production plant for biofuels in the United States. The facility built in 2009 produces enzymes for corn-based ethanol, and for cellulosic ethanol (advanced biofuels made from agricultural, forestry and municipal solid waste.) Novozymes is the leading supplier of enzymes to the U.S. biofuels market, as well as the overall global biofuels market.

Novozymes is the world leader in biological solutions. Together with customers, partners and the global community we improve industrial performance while preserving the planet's resources and helping build better lives. As the world's largest provider of enzymes and microbial technologies our bioinnovations enables higher agricultural yields, low-temperature washing, energy-efficient production, renewable fuel and many other benefits that we rely on today and in the future. Novozymes global mission is "Together we find biological answers for better lives in a growing world. Let's rethink tomorrow."

The Novozymes' Blair Nebraska plant is located on a 37-acre Biorefinery Campus located in Blair, Nebraska. The site is within a 500-mile radius of 60% of all ethanol producers in the U.S. The Blair site began mixing and distributing enzymes to the U.S. market in, October 2009. In 2010 Novozymes introduced the first commercially-viable enzymes for advanced biofuels. The enzymes Novozymes creates help biofuels burn cleaner, provide better octane for your engine, are good for your wallet, and are kinder to the Earth.

Prairie Sky Seed Inc.

Prairie Sky Seed is a seed cleaning and conditioning facility located in Western Nebraska. We specialize in Wheat, Triticale and Oat seed production.

Tim Kumpf
Owner

Markets: Worldwide

Products Offered

Leading varieties of non-GMO and organic seed corn

Seitec Genetics is an independent seed company dedicated to delivering rare and uncompromising value. Many seed brands are focused on the GMO traits their parent company offers which limits their genetics and market reach. At Seitec Genetics we have maximum flexibility to offer the very best traits and genetics through licensing agreements across all leading developers and utilizing our internal corn genetics development program to match farmer needs.

While many seed brands bypass hybrids with regional advantages to instead work with fewer hybrids, we deliver the very best hybrids for local areas. As we continue to push yield levels higher, top-yielding hybrids need specialization for their environments to capture their top yield potential. We help farmers capture those top yields by aggressively testing a broad set of genetics to deliver the hybrids for their specific area. We also use VigorShield™ to share actual germination test results with you, which includes a stress-induced saturated cold test. It's all about working with a seed company that truly prioritizes the farmers' best interests.

Siouxland Ethanol LLC

Located near Jackson, Nebraska, Siouxland Ethanol promotes rural economic development and contributes to America's energy independence. Now producing 90 million gallons of ethanol each year, Siouxland Ethanol became operational in May 2007. The plant consumes 30 million bushels of corn each year to produce a clean-burning, high-octane gasoline additive. This corn is purchased from our local farmers and elevators and the dollars turn over in our local communities.

Distillers grains are a co-product of the ethanol production process at Siouxland Ethanol. This high-value livestock feed has become widely accepted among livestock producers. Siouxland Ethanol produces 210,000 tons of distillers dried grains with solubles (DDGS) each year. Much of this is sold locally to cattle feeders, as well as poultry feeders. Siouxland Ethanol also produces 14,000 tons of corn oil each year.

The local area benefits in other ways from Siouxland Ethanol. Nearly 40 people are employed at Siouxland Ethanol, which has an annual payroll of approximately \$2 million. These employees receive above-average wages and enjoy good working conditions in a modern plant that's computerized and automated every step of the way. Spin-off businesses have resulted from Siouxland Ethanol, such as local trucking businesses and a convenience store in Jackson, generate economic development in the town of Jackson and Dakota County.

Veramaris

Veramaris is a natural, non GMO algal oil rich in the two essential omega-3 fatty acids EPA and DHA. We enable our partners along the value chain to become independent from wild-caught fish and meet the growing demand for animal protein responsibly. Veramaris is a 50:50 joint venture of DSM and Evonik for the production of the omega-3 fatty acids EPA and DHA from natural marine algae. Veramaris is produced through large-scale fermentation at its facility in Blair, Nebraska. Veramaris was launched because our parent companies shared a vision: to conserve marine life by using a resource the ocean provides – natural marine microalgae.

veramaris.com

1374 Revere Rd.
Yardley, PA 19067

Veramaris produces omega-3 fatty acids for animal nutrition from microalgae. Our algal oil, a breakthrough innovation, helps conserve the natural biodiversity of our oceans – a vision shared by the scientists and engineers at our two parent companies, DSM and Evonik. After two years of joint development, DSM and Evonik launched Veramaris in 2018. We are committed to helping set new standards for the sustainable growth of animal protein within planetary boundaries.

Veramaris offers a solution for the reliable supply of omega-3, produced from natural marine algae on an industrial scale. With a production facility in Nebraska, Veramaris is supported by a \$200 million investment from companies DSM and Evonik. The Blair, Nebraska plant has capacity to meet 15% of the global omega-3 fatty acid demand for salmon aquaculture.

gentleroll.com

ebmmanufacturing.com

1014 Sherwood Rd.

Norfolk, NE 68701

Products Offered

- Gentle Roll screener
- EBM Aspirator

EBM Manufacturing specializes in the manufacturing of multi-purpose screening and aspiration equipment serving the agriculture industry. Industries served include feed, grain, pet food, edible beans/pulses, aquaculture, and wood pellets.

The Gentle Roll screener works to gently remove fines and overs from products or to separate them by size. It is fully enclosed to be dust and weather tight and built to run 24/7. The Gentle Roll does not shake or vibrate making it easy to install and maintain.

The EBM Aspirator is a closed circuit, single pass aspirator designed to remove lightweight material from good product. It can be used in combination with the Gentle Roll screener or as a stand-alone piece of equipment. Adjustments and sight windows allow the operator to make adjustments during operation.

Holland Scientific, Inc.

Holland Scientific sells plant sensing instrumentation for agronomists, turf grass specialists, and farmers. Our sensors can be used in real-time to apply nutrients to crops on-the-go by farmers for increasing yields and improving nutrient use efficiency (NUE) across agricultural landscapes.

Holland Scientific sensors collect data about the earth, whether this information pertains to plant or soil. Whether our sensors are carried by scientists or mounted to carts, tractors, drones or airplanes, our sensors provide you, the user, with valuable and timely information about the earth and the plants that grow in it. Holland Scientific is pleased to provide novel and unique instrumentation for the study of creation and the processes that encompass it.

Holland Scientific business efforts include:

- Developing and creating affordable electro-optic instrumentation for assessing plant and soil characteristics.
- Developing algorithms and models that utilize spectral reflectance information to determine plant nutrition needs.
- The development and creation of sensors that provide accurate and highly stable active-optical NDVI and NDRE vegetation index measurements.

- Barrier Systems | Road safety products and services
- Road Zipper | Road barrier transfer machine
- Snoline | Road marking tape and accessories

The Lindsay family of irrigation brands includes the strong and durable Zimmatic center pivot and lateral move agricultural irrigation systems and industry-leading FieldNET remote irrigation management and scheduling technology, as well as irrigation consulting and design and industrial IoT solutions.

Also a global leader in the transportation industry, Lindsay Transportation Solutions (LTS) manufactures equipment to improve road safety and keep traffic moving on the world's roads, bridges and tunnels. The LTS flagship product, the Road Zipper System, uses moveable barrier technology to manage lanes and maximize space while creating a positive traffic barrier to deliver a safe, strategic and flexible solution.

MatMaCorp

The MatMaCorp diagnostic system is easy to use, portable, and does not require laboratory tools or technical skills. This makes for a device that provides rapid answers anywhere in the world, under any conditions. The system offers rapid, real-time, low throughput testing, for veterinary clinics, farms and producers, to analyze animal characteristics, provide on-site surveillance and detect genetic traits that may result in disease.

MatMaCorp systems are widely used in a variety of applications ranging from testing dairy cattle for the A2 form of beta-casein, remote testing for African swine fever, managing congestive heart failure in American cattle and on farm surveillance for porcine reproductive and respiratory syndrome virus (PRRSV) in swine.

MatMaCorp is the developer and manufacturer of a portable lab that's changing livestock and companion animal testing. It allows veterinarians and livestock producers to test for diseases and genetic traits on-site. Our lab in a box is simple and portable and our product line supports tests for dairy cattle, swine, and beef cattle. Our products are currently being used in ten countries across five continents.

The Science of Healthier Animals®

Merck Animal Health is a leading provider of animal health medicines, technologies and solutions that help to ensure animal health and welfare and a strong and safe food supply for the world.

For more than a century, Merck, a leading global biopharmaceutical company, has been inventing for life, bringing forward medicines and vaccines for many of the world's most challenging diseases. Merck Animal Health, a division of Merck & Co., Inc., Kenilworth, N.J., USA, is the global animal health business unit of Merck. Through its commitment to The Science of Healthier Animals®, Merck Animal Health offers veterinarians, farmers, pet owners and governments one of the widest ranges of veterinary pharmaceuticals, vaccines and health management solutions and services as well as an extensive suite of digitally connected identification, traceability and monitoring products.

Merck Animal Health is dedicated to preserving and improving the health, well-being and performance of animals and the people who care for them. It invests extensively in dynamic and comprehensive R&D resources and a modern, global supply chain. Merck Animal Health is present in more than 50 countries, while its products are available in some 150 markets. For more information, visit www.merck-animal-health.com or connect with us on LinkedIn, Facebook, and Twitter at @MerckAH.

NEOGEN Genomics

NEOGEN offers genomic services worldwide which deliver innovative DNA testing for the discovery and commercial application of genomic advances which enhances the safety and abundance of life. DNA testing services are provided for food, animals, aquaculture, agronomy, forestry, horticulture and human, as well as supporting the research institutions, breed associations and breeding companies serving these industries.

State-of-the-art genomics and bioinformatics, plus our work with leading scientists drive NEOGEN's world leadership in DNA testing for food production, animal well-being and research.

Located in Lincoln, Nebraska, and with labs in six other countries, NEOGEN Genomics (formerly Neogen GeneSeek Operations) is the world's largest genotyping lab. NEOGEN provides genetic solutions for a wide array of industries as diverse as beef cattle, dairy, swine, poultry, companion animal, plant, aquaculture and much more.

Orthman Manufacturing, Inc.

Orthman is a true American institution. Founded in Nebraska by one man with a vision to make farming better for producers, Orthman is built on hard work, innovative design, meticulous attention to detail and a passion to lead the world in modern production agriculture.

Since the 1960s, Orthman has brought innovation after innovation to farming. Seeing the trend toward larger and larger equipment, Orthman perfected and patented an internal folding toolbar in the 1970s, then used its expertise in toolbar design to invent the stack-fold toolbar in the 1990s that allowed planter boxes to remain upright during transport. Orthman's reinvention of the disc stabilizer in 1978 ultimately led to the development of the GPS Tracker® IV, the industry's only ground-engaging implement-steering system.

Orthman's work in row crop cultivators led to the company's biggest triumph to date: the 1tRIPr strip-tillage system. An instant success for its ability to perform ideal seedbed preparation, precision nutrient placement and optimal root zone conditioning in a single pass, the 1tRIPr is sold in 14 countries and is the world leader in precision strip-till agriculture machinery.

QUANTIFIEDAG®

Quantified Ag® provides a pro-active system for cattle producers and feedlot operators to track an animal's biometrics and behavioral data using a non-invasive cattle ear tag equipped with sensors to monitor the health of the individual animal or herd. The technology can detect animal illness, thus reducing the potential for disease outbreak, allowing for easy identification of sick animals, and providing easy-to-use software reports on any mobile device, desktop, tablet or secure website. Proprietary algorithms are able to identify animals showing signs of illness or disease and provide real-time alerts.

RealmFive

RealmFive is changing the way customers interact with agricultural technology in areas including agronomy, inventory, irrigation, livestock, and machinery. RealmFive's Connectivity Platform has solved the problem of expensive and unreliable wireless connection to multiple types of sensors in tough crop canopy and noisy RF environments. Using highly improved long-range radio technology and easy-to-deploy devices, RealmFive enables remote monitoring, control, and data-driven decision-making. The RealmFive Connection Platform is modular and flexible, allowing for simple third-party integration into the platform and a robust API to other digital farming platforms. With an expanding portfolio of applications including soil moisture, weather, irrigation monitoring, and state monitoring, RealmFive is bringing sensor-to-cloud solutions to agriculture.

REALM AGRICULTURE

RealmFive is changing the way customers interact with agricultural technology. By enabling remote monitoring, control, and data-driven decision-making -- even in challenging environments -- the RealmFive Connectivity Platform empowers its users.

With hundreds of dealers in more than 40 countries, Reinke Manufacturing is the world's largest privately held manufacturer of center pivot and lateral move irrigation systems. Family owned since 1954, and headquartered in Deshler, Neb., Reinke develops products and technology designed to increase agriculture production while providing labor savings and environmental efficiencies. Reinke is a continued leader in industry advancements as the first to incorporate GPS, satellite-based communications and touchscreen panel capabilities into mechanized irrigation system management. For more information on Reinke or to locate a dealership, visit www.reinke.com or call 402-365-7251.

Settje Agri-Services & Engineering, Inc.

Since 1997, Settje Agri-Services has designed, engineered, permitted or constructed hundreds of livestock facilities. We work with growers, producers, farmers and integrators to provide livestock production systems that maximize efficiency, profitability, long-term value and return on investment.

Dean Settje
Owner and President
dsettje@settje.com

settje.com

Markets: United States, Russia, Africa, South America, Australia

Our company offers unrivaled experience in the planning, design, engineering, construction and environmental compliance requirements of beef, swine, poultry and dairy facilities.

Modern production facilities are complex systems that require detailed planning and specifications. We take a consultative, technical approach with our customers, and are focused on ensuring that every project culminates in a facility that meets their requirements and exceeds their expectations.

Whether it's a 2,400 head hog confinement barn or a 20,000 head cattle feedlot, our approach involves an attention to detail at every step: site selection, design, engineering and construction - all phases will be managed and verified to meet the agreed upon specifications and quality standards.

Services Offered

- Facility development and project facilitation
- Site selection, design and engineering
- Environmental and regulatory permitting
- Building and facility design and engineering
- Construction management
- Web-based record keeping/compliance
- Nutrient Management Plans
- Manure marketing services

Standard Nutrition Company

Products and Services Offered

Our commitment to agriculture is demonstrated by the expertise and diversification we offer through the family of companies under the SNC umbrella:

- Standard Dairy Consultants
- Standard Nutrition Services (pork and poultry)
- AC Nutrition (cattle)
- Bluebonnet Feeds (equine and backyard animals)
- Ag Property Solutions (construction and maintenance for livestock producers)

A long-time leader in livestock nutrition and management consulting, Standard Nutrition Company is a privately held, agricultural holding company that has been offering innovative solutions, including quality products and services, across multiple markets since 1886.

Mike Wisnieski

Director of Livestock Marketing

mwisnieski@standardnutrition.com

standardnutrition.com

Suite 100
Omaha, NE 68144

Standard Nutrition Company is built on values and a proven philosophy – help producers prosper and we will too. In a world where this approach is all-too-often uncommon, we know this commitment is why people count on us for their continued success in an increasingly competitive livestock industry. With integration increasing, independent producers can be at a disadvantage as compared to larger operations. We keep clients in charge of their own farm decisions, all while providing the full resources of integrated operations.

Our companies provide species-specific support and products to some of the most successful swine, dairy, beef and poultry producers in the world, as well as specialty products for equine, sheep, goat, wildlife and other species. By expanding from a nutrition focus to production management, technology and, most recently, construction, SNC now provides a comprehensive set of solutions for livestock producers throughout the United States.

TractorMat

We are the first company of our kind, using reverse 3D engineering to make laser-measured, custom-fitted mats for a variety of farming equipment, including tractors, combines, sprayers and side by sides, guaranteed to fit perfectly.

TractorMat.com

1267 280th St.
Seward, NE 68434

Markets: US, Canada, Australia, New Zealand, Western Europe, South America

Products Offered

We have mats for most new and older John Deere, Case IH, and New Holland equipment as well as a few mats for Claas and Kubota.

TractorMat, founded in 2016, is a start-up company based in Seward, Nebraska. We partner with over 600 farm equipment dealers, cooperatives, and seed companies among other types of agriculture companies. Customers choose to partner with us because of our world-class quality, the value farmers and ranchers find in our products along with our remarkable customer service.

Farmers and ranchers love our mats as they save them tons of time and money keeping their cabs clean; they are light-weight, durable and easy to take out, power wash and re-install in moments. We are able to customize our mats with names and logos, thus, providing a creative and cost-effective way for organizations to advertise and market their brand, as well as providing their customers a high-end gift as a token of appreciation.

Valley® Irrigation

Valley Irrigation founded the center pivot irrigation industry in 1954, and our brand is the worldwide leader in sales, service, quality and innovation. With historical sales of more than 250,000 center pivots and linears, our equipment annually irrigates approximately 25 million acres (10 million hectares) around the world.

- Variable Rate Irrigation
- Crop Anomaly Detection Services

To feed and clothe the increasing population of a diverse world, growers require solutions that help them produce greater yields while using less energy and water. Valley Irrigation supplies farmers around the globe with durable machines and reliable technology to help them be more efficient and make smarter business decisions based on field data.

Valley center pivot and linear (lateral) irrigation machines are trusted by generations of growers to withstand the demands of nearly any climate or terrain, and maximize yields for nearly any crop. Valley remote management helps them monitor and control their equipment from anywhere, improving their quality of life. Industry-best Valley technology solutions allow them to apply water and crop protectant with efficiency and accuracy.

As the founder of the entire center pivot industry, we remain dedicated to providing innovative, precision irrigation solutions now and into the future.

Ward Laboratories, Inc.

Ward Laboratories strives to be a resource to support agricultural producers. Our mission is to provide accurate, swift, and affordable laboratory analysis as well as guidance to ensure producers make the best decisions for their operations. Dr. Ray Ward and Dr. Nick Ward guide crop producers through analyses while soil health experts with global experience are available to help producers identify actionable steps based on soil health data. Water testing can ensure safety and quality for intended use. Feed reports provide nutrient information to formulate mixed rations and our animal scientist helps livestock producers understand macronutrient requirements and how to identify mineral imbalances.

Ward Laboratories, Inc. is a full-service agricultural testing laboratory analyzing soil, feed, forage, plant, water, manure, and fertilizer samples. We aim to provide information needed to make critical production decisions. Participation in proficiency programs and trained, educated personnel ensures accurate, precise, and reliable test results. Our goal to fully serve farmers and ranchers is accomplished through consultation by professional staff before, during, and after testing.
